Washington, D.C. 20554

Re: WT 11-65

Dear Commissioners:

For more than a decade ER Card, LLC have provided individuals with patient-centric electronic personal health records. Having your latest medical information available 24/7 for emergency workers, doctors, nurses and other medical personal can literally save a life. A key component of our ER Card solution is having access to the Internet, so any medical office can quickly obtain a patient's record.

In today's world, that access may often be wireless. That's why we are excited to support AT&T's intention to join together with T-Mobile, which will result in nationwide next-generation wireless services.

We are not the only application that depends on the availability of robust wireless networks. The medical industry has long anticipated the benefits that come from being able to have full video and fast data service over a wireless connection. It means that patients can be treated at home, while remote professionals wirelessly monitor their condition. It will enable community general practitioners to share test results with specialists at nationally acclaimed hospitals and cancer centers, allowing consultations without the necessity of long travel for ill patients. Health care professionals can improve their knowledge and skills in virtual classrooms. These are just a few of the benefits this new technology will bring, and of course they are not limited to medical applications.

I hope you will embrace this opportunity and support these exciting new opportunities by approving this merger. The sooner we can provide people with the next generation of wireless access, the more lives we will save.

Sincerely,

Maria Gil
